

General Operations of the Battle Zero Tactical Headset

1. Turn radio off before connecting any microphone or headset.
2. The connector cord and the push to talk module have male/female quick disconnect ports that need to be carefully lined up before being attached. DO NOT force the quick release connectors together as you may damage the pins. Use light force and twist until you find the sweet spot.
3. Connect the Battle Zero Headset to the remaining connector on the PTT.
4. The Battle Zero Headset is worn behind the head and has an adjustable strap.
5. The dual bone conduction vibration sensors should rest in front of your ears on the temporal bone of your skull. The vibrations from talking should transmit when the push to talk is active. The communications you receive will also be through vibrations on your temporal bone.

6. Attach the radio connector to the radio according to manufactures instructions and SLOWLY turn the volume up to a comfortable level.
7. To transmit, depress the PTT in most center spot of the easy to locate PTT button.
8. The heavy duty swivel clip can be attached to your clothing or easily fed through a vest or molle system.
9. To ensure the life of the headset wipe it clean after every use. Do not use soap or cleaning chemicals.
